

Bill Nye, Deep Ocean Currents

Well the fish and plants in oceans
Need the currents to survive
'Cause the currents bring them food to eat
And help them move so they stay alive

The Gulf Stream current is huge
A massive river in the sea
It makes the oceans swirls around like a clock
And it's warm like a summer breeze

The swift ocean currents help fish to get around
(The swift ocean currents help fish get around)
The swift ocean currents help fish to get around

Ocean currents are swift
They really move that water around
And they're often used to help navigate
As ocean explorers found

They change the climate of this great big world
Warm currents get around
They keep the tropics cool and the Icelanders hot
And those Londoners all fogged down

The swift ocean currents help fish to get around
(The swift ocean currents help fish get around)
The swift ocean currents help fish to get around
