Broadside Electric, Ampere's Law Song

Refrain:

Andr Ampre's magical, mystical, wonderful law! Of Maxwell's equations, it is the longest and strangest of all!

On the left side, he wrote circulation Of magnetic field, cause it was neat. On the right hand side of his equation --Mu-naught I he thought it was complete.

(Refrain)

Decades later, Maxwell saw disaster, Although he thought of Ampre as a saint --In between the plates of a capacitor The right side's zero, but the left side ain't! To fix this problem, he added to the right side Displacement current, a brand new quantity! It started mu-naught eps'lon-naught and ended by The time derivative of phi-sub-E.

(Refrain)

And so to Maxwell the myst'ry was reveal-ed--He saw how light could move through empty space. The changing B-field made the changing E-field, And vice-a-versa, all at the perfect pace.

(Refrain)
