the effect of cocaine is a feeling
that may be described
as a great amount of excitement and joy.
You may have this high feeling within seconds or minutes of using cocaine.
This feeling may only last for a few minutes
or it may last for a few hours.
Because of how cocaine makes you feel,
you may want to keep using more.

How does Cocaine work?

Your brain produces a substance called dopamine
doPAMine when you feel happy.

After a time

The d.../Amine when you feel happy. After a time (6x)

The dopamine decrease is because transporters knock out the dopamine.
The transporters put the dopamine back in the area in your brain
where it is kept until your next happy event.
Cocaine works by keeping the transporters from locking up the dopamine.

by keeping the transporters from locking up the dopamine. (3x)

While the dopamine stays free
you have a feeling of great happiness or well-being.
The first time you use cocaine you will usually feel a great amount of excitement and joy.
If you use cocaine second time you'll probably not have the same effect.
The high feeling may not be as strong and may not feel as great.

COCAINE ABUSE IS WHEN ONGOING COCAINE-USE LEADS TO PROBLEMS BEING ROUND

by keeping the transporters from locking up the dopamine. (4x)
