Iced Earth, Last December

The howling winds blow On this moonlit night Eyes locked in fear With a dark embrace The bitter cold winds Freeze the tears that fall Hands held in grace As we take the final step

Obsessed with our love Here is our fate To need the final call On this special winter day A message to our elders They surely won't forget Our love must last forever In death we shall not part

It seems like only yesterday Our lives together planned They say it's just a passing phase We're damned by our youth Why does no one understand What we have is real

This is not your average love it's forever

Last December
Mother you have forced us here
Last December
Father now we'll disappear
Last December
One last step we fade away

So we take the final step Heed the final call Together we are strong Divided we must fall Teenage suicide Our only way out Together we might live Divided we must fall

Last December
Mother you have forced us here
Last December
Father now we'll disappear
Last December
One last step we fade away
