

# Rasputina, The Question Of Time

Spoken:

Some time later in the future, near the end of time, a parallel universe devoid of any semblance of  
Or at least, it was all... extremely unclear.

We had learned to say anything.

We called things the opposite of what they were.

Time was measured by progress but things were deteriorating so rapidly that one felt time was going

We owned neither the world nor time.

We know that now.

Space and time, some quantum gravity theorists say, are most likely an illusion. The philosopher A

"That's not the way the world really works anymore," the arrogant official argued. "

He sees the future as something even more far-reaching.

"You have a choice. You can either create your own future, or you can become the victim of a

We don't have time today to cover simultaneousness, but we will be discussing wormholes: tunnels
