

Tom Waits, Army Ants

The Whirligig Beetles are wary and fast with an organ to detect the ripples.

The Arachnid Moths lay their eggs inside other insects along the borders of fields or roads in clusters.

The Ribbed Pine Borer is a longhorn beetle, their antenna's are half the length of their body and the

Robber Flies, with their immobile heads, inject a paralyzing fluid into their prey that they snatch from

The Snow Flea's mode of locomotion, strange and odd, with a spiny tail mechanism with hooks and

The female Praying Mantis devours the male while they are mating. The male sometimes continues

Every night wasps bite into the stem of a plant, lock their mandibles into position, stretch out at right

If one places a minute amount of liquor on a scorpion, it will instantly go mad and sting itself to death.

The Bombardier Beetle, when disturbed, defends itself by emitting a series of explosions, sometimes

It is commonly known that ants keep slaves. Certain species, the so-called Sanguinary Ants in part

And as we discussed last semester, the Army Ants will leave nothing but your bones.

Perhaps you've encountered some of these insects in your communities, displaying both their pred
