

# 702, I Still Love You

[Verse 1:]

See everybody needs someone by their side  
And I canand#8217;t go on without you another night  
Sine been hanging shitand#8217;s been done  
My life has been so slow without you, you  
See it donand#8217;t take a rocket scientist to know I  
love you  
And it donand#8217;t take a rocket scientist to know I  
need you  
See if you believe that you and me  
Can change the world some day  
Then you believe me when I say

[Chorus:]

I still love you  
I still love you  
I decided I still love you  
I still love you  
I decided

[Verse 2:]

So what do you think  
Lets get back together, lets get back together  
Itand#8217;s nothing it could hurt, it could only get  
better  
Think of what it lacks feel like  
You and I didand#8217;t turn out nice into forever  
See, see it donand#8217;t take a rocket scientist to know  
I love you  
And it donand#8217;t take a rocket scientist to know I  
need you  
See if you believe that you and me  
Can change the world some day  
Then you believe me when I say

[Chorus:]

I still love you  
I still love you  
I decided I still love you  
I still love you  
I still love you  
I still love you  
I decided I still love you  
I still love you  
I decided

[Verse 3:]

Never to not be so happy and sure of myself  
Baby life without you is so dull, so dull, so dull  
Now I know it will never be me loving someone else  
This precious love you much I need this star  
I remember when we first fell in love  
I was too young to know what it was  
I couldnand#8217;t address what made melt  
But quick to tell you how it felt  
That love is so real and it still is

[Chorus:]

I still love you  
I still love you  
I decided I still love you  
I still love you  
I still love you  
I still love you  
I decided I still love you  
I still love you

[Bridge:]

Just look at the things, look when you do me and  
you

Life changing the face of those and that we once  
knew  
So when itand#8217;s the sun the shine the oceans are blue  
And that we can laugh and cry and that through
