

Alchemist, Bio Approach

Molten rock lays dormant, around a tiny star,
As microscopic life forms, approaches from afar.
Traveling infinity, the rock and ice collides,
Hostile possibilities, destruction bringing life.
Hurling through the cosmos, a frozen world of ice Macro amino acids,
the building blocks of life,
Contained in basic compounds.
The plan for life persists,
To start the evolution,
The world where we exist.

Build our world, from this dust.

Elements and molecules, why we exist today.
Speed toward our system, a million miles a day.
Suspended in a frozen form, macrobiotics sleep.
Colliding with our mother, evolution's free.
So free your evolution, Is this how we came to be?
Bio-approach is the only reason we live.

Build our world, from this dust.
