

Bill Nye, Water Cycle Jump

You should know that it all starts with the sun
Evaporated oceans and lakes
We're here to tell you about

Rain Rain

The water cycle makes it Rain Rain
Evaporation makes it Rain Rain
Condensation makes it Rain Rain

Sun heats the ocean, molecules go round and round
Go much faster they begin to jump up and down
Become water vapor flying up to the sky
Get together, form a cloud
My, oh my
I'm talking about condensation
You know it's fly
Water from the earth evaporates to the sky
And what consenses must come down just the same
When it comes down, it's riggida riggida riggida rain
You know rain is precipitation
Collects on stuff to evaporate in
Then it starts all over and that's a fact
That's the water cycle, you can believe that

Rain Rain

The water cycle makes it Rain Rain
Evaporation makes it Rain Rain
Condensation makes it Rain Rain

Your brain is on vacation
If you don't know about precipitation
The water cycle never stops you see
C-Y-C-L-E
That's the cycle, and you know it's like that
The Earth recycles water, you know it's not whack
It's all natural, it's not coincidental
Keep the water clean because that's environmental

Rain Rain

The water cycle makes it Rain Rain
Evaporation makes it Rain Rain
Condensation makes it Rain Rain
Peace, I'm outta here
