

Bill Nye, Whatta Brain

Ooh yeah, ooh
Ooh yeah, ooh

Whatta brain, whatta brain, whatta brain
What a mighty good brain
(Say it again now)
Whatta brain, whatta brain, whatta brain
What a mighty good brain
(It's a mighty mighty good brain)
Whatta brain, whatta brain, whatta brain
What a mighty good brain
(Oh yes it is now)
Whatta brain, whatta brain, whatta brain
What a mighty good brain
(Oh, oh yeah)

I wanna take a minute right now while we have a lull
To talk about the great stuff that's inside your skull
It's the most important organ and you know that it's true
'Cause it controls every function that your body can do
But your brain's not selfish and it ain't no jerk
It's got the spinal cord to help out with the work
And don't you be thinking that it's two to the crew
'Cause the central nervous system's helping out too
Call it Team Brain

Whatta brain, whatta brain, whatta brain
What a mighty good brain
(Say it again now)
Whatta brain, whatta brain, whatta brain
What a mighty good brain
(Oh, oh yeah)

When it comes to memory your brain's no snob
'Cause storing information is a serious job
Long term, short term, ancestral, and eidetic
With four types of memory it gets pretty hectic
Now it's the time of the song where we say goodbye
Gotta make room for the big brain Bill Nye
So pay close attention and use the refrain
Your most important organ is your mighty good brain

Ooh yeah, ooh
Whatta brain, whatta brain, whatta brain
What a mighty good brain
(Say it again now)
Whatta brain, whatta brain, whatta brain
What a mighty good brain
(It's a mighty mighty good brain)
Whatta brain, whatta brain, whatta brain
What a mighty good brain
(Oh yes it is now)
Whatta brain, whatta brain, whatta brain
What a mighty good brain
