

Cassie, Fragile heart

When it comes to love
I know that pain
Comes with the territory
I've been here before
Can't take no more
To end like a sad love story
Now lets you here no hesitating
Just need a little understanding
Baby I don't want to wonder how you got close to my heart
Say you'll never leave me lonely
Say that you wanna know me
Tell me baby if I'll let you hold me
That I'll be safe in your arms
So baby be gentle
Hold on, don't let go
If we fall apart you'll break my fragile heart
Promise you'll always be there
To handle it with care
Love me from the start
Don't break my fragile heart
Don't break my fragile heart
Don't break my fragile heart
Don't break my fragile heart
Don't break my fragile heart
Don't break my heart
It seems that we
Were meant to be
In love with way forever
We were in need baby
You see
That you are a treasure
Gotta know you're dedicated
Say you through, you gotta be patient
Baby I'm so glad I waited for you to come along
See that you'll never leave me lonely
See that I'm your one and only
Tell me baby if I'll let you hold me
That I'll be safe in your arms
So baby be gentle
Hold on, don't let go
If we fall apart you'll break my fragile heart
Promise you'll always be there
To handle it with care
Love me from the start
Don't break my fragile heart
Don't break my fragile heart
Don't break my fragile heart
Don't break my fragile heart
Don't break my fragile heart
Don't break my heart
After all I said and done
After all the rain is gone
It feels too good to know
You're the sun to help me grow
After all the stars have fallen
You'll be there to hear my calling
So baby be gentle
Hold on, don't let go
If we fall apart you'll break my fragile heart
Promise you'll always be there
To handle it with care
Love me from the start
Don't break my fragile heart
Don't break my fragile heart

Don't break my fragile heart
Don't break my fragile heart
Don't break my fragile heart
Don't break my heart
Don't break my fragile heart
Don't break my fragile heart
Don't break my fragile heart
Don't break my heart
