

Dr. Octagon, Biology 101

Yeah

At 40,000 kelvin, it's Dr. Octagon,
with the Emperor General
drop down to 40 g's

can science achieve the unified theory of complex systems

permenantly skeptical of friends of the institute

external faculty, a routine exerts selected pressure by

killing less-fit programs

life evolves, in cyber space

green and blue objects of self-replicating lightning represents

random mutation complete with chaotic systems such as turbular fluids

heated gasses are formless

fully complex, amino entree disappear the order in which you

ordered the poetry the torsist liquid terms compiled among a list of

31 ways to define

grammatical the degree of universality in a language required to

describe a style

effective the degree of regular rather than random information

for instance complexity equals the capacity of an un expecting

observer

thermo dynamic deaf of the amount of resource to put back a system

together from scratch

pioneering, engineering, cybernetic, cellular, calculus

co-operating flatly contradicting predictable circumstances including

uranium 235 is obtained from bombs fission

can science achieve a unified theory of complex systems?

maybe so

can science achieve a unified theory of complex systems?

maybe so

can science achieve a unified theory of complex systems?

maybe so

can science achieve a unified theory of complex systems?

like carbon dioxide you messing with the chemicals, warfare different stars

in the atmospheres like haley's comet computers that will make you vomit

change the earth south saliva run in your mouth gastric juice more beyond

since mother goose created shapes the first man was hairy apes

7, 35 PPTD

over powering spray crops like DDT

the first around apollo 13 beaming down through rain drops white pieces hit

the scene

atomic formats complex playin on silver DATs

guarded by sonic steel and taken off by thundercats

you on the avenue wishin you could see me my force field shuts in two eyes

seein three of me

illusions fusions particle gas confusions i run space shuttles in EM you

the solution

takin off from boe meet me at the black hole in times four your mind seems

to move in tider showin you the spectrums

the past in fabric liner you in my future now

is h₂o a gas or a liquid?

perhaps concepts could not explain

is h₂o a gas or a liquid?

perhaps concepts could not explain

is h₂o a gas or a liquid?

perhaps concepts could not explain

is h₂o a gas or a liquid?

psychology is not applied biology nor is biology applied chemistry

level independant some degrade the levels above and below captive

intricancies after their friends give interest

theories collapse, perhaps concepts cannot explain irreversible concrete

philosophical developments

such analysis indicate

emergence naturally, in a simple society

the pale matrix summerizes the scorming affluent software 30 arc seconds

strategy like drops of water floating in a void unstable atoms orbit this
 new cloud nuclear having excess neutrinos or protons teeter on the edges of
 nuclear stability nor and drip lines under the stress some develop a halo
 bale radioactivity isotopes exotic
 depending on their velocity their charges narrow momentum distribution
 force is directly reflected
 electric magnetic c 22 l i 11 escape particle bombardment
 properties of the nucleus
 v8 in the sun it produces easily detected
 neutrinos much less to predict the standards can be designed if you end it
 and it provide for continuing evolution of technology by remaining
 compatible with existing applications in programming language
 psychology is not applied biology nor is biology applied chemistry
 whats the issue?
 psychology is not applied biology nor is biology applied chemistry
 whats the issue?
 psychology is not applied biology nor is biology applied chemistry
 whats the issue?
 psychology is not applied biology nor is biology applied chemistry
 whats the issue?
 psychology is not applied biology nor is biology applied chemistry
 whats the issue?
 delta 9 approximate time my face in venus the sun is over there and nothing
 gets between us
 you the earthling trying to float its a mental thing i got oxygen 8 hours
 of space time you must return quick
 please don't waste time
 you get down here, the moon is a place to fear with 2 minutes on the planet
 you're only bound to panic we have no extras, bags, etcetera
 what if your obstacles backfires you inflate in seconds nervous like flat
 tires one seconds left to orbit has last breath
 telecast to earth a astronaut didn't make it we move beyond
 your navigation enable a 32 switching like channel 13
 late at night you see a blank screen focus on the outer limits but you're
 back on stage
 on the line of scrimmage i am out here come and get me with no equipment
 call the president not even rocks or fossils live damaged by the elements
 is light the source?
 touch my delicate instrument
 is light the source?
 touch my delicate instrument
 is light the source?
 touch my delicate instrument
 is light the source?
 touch my delicate instrument
