

The 1975, The 1975

we are right now
in the beginning of a climate and ecological crisis
and we need to call it what it is

an emergency
we must acknowledge that we do not have the situation under control
and that we don't have solutions yet

unless those solutions
mean that we simply stop doing certain things
we must admit that we are losing this battle

we have to acknowledge that the older generations have failed

all political movements in their present form have failed

but homo sapiens have not yet failed

yes, we are failing
but there is still time to turn everything around
we can still fix this

we still have everything in our own hands

but unless we recognize the overall failures of our current system
we most probably don't stand a chance

we are facing a disaster of unspoken sufferings for
enormous amounts of people.
and now is not the time
for speaking politely or
focusing on what we can or cannot say

now is time to speak clearly

solving the climate crisis is the greatest and most complex challenge
that homo sapiens have ever faced
the main solution however
is so simple that even a small child can understand it

we have to stop our emissions of greenhouse gases

Homo sapiens have not yet failed
Modernity has failed us
