

# They Might Be Giants, Thermostat

When the hands that operate the motor lose control of the lever  
When the mind of its own in the wheel puts two and two together  
When the indicator says you're out of oil should you continue driving anyway?  
There's a thermostat that regulates the temperature  
That might not be reliable  
That should be disconnected

Turn it up, turn it down  
Turn it up when the cold brings you down  
When the heat bothers you turn it down  
Turn it up, turn it down

As I was just saying  
As I was just saying  
As I was just telling you a minute ago

I was just talking and someone interrupted  
Or was it a loud explosion?  
Or is the thermostat engulfed in flames  
Or is it just me?

Turn it up, turn it down  
Turn it up when the cold brings you down  
When the heat bothers you turn it down  
Turn it up, turn it down

As I was just saying  
As I was just saying  
As I was just saying

Turn it up, turn it down  
Turn it up when the cold brings you down  
When the heat bothers you turn it down  
Turn it up, turn it down

Turn it up, turn it down  
Turn it up when the cold brings you down  
When the heat bothers you turn it down  
Turn it up, turn it down
